HAHN OIL DAMPERS

cross-sectional view

HAHN oil dampers are used for slowing down moving weights

Oil dampers are closed, maintenance-free hydraulic elements which are used for the smooth slowing of feed units, linear drive units, flaps, etc.

Fixed dampers work in extension, compression or in both directions and can hold up from 5N to 2500N. All fixed dampers are available in different sizes in steel and stainless steel AISI 303/304 and AISI 316L/316Ti.

HAHN oil dampers with adjustable damping force

Adjustable dampers can be ordered if the exact damping force is unknown. By simply turning the piston rod in the extended position, the damping force becomes bigger or smaller. Adjustable dampers are only available in regular steel.
